

# Ice Stupa (Indoors)

## SUPPLIES

- mountain ice mold

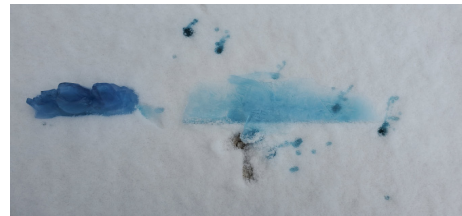

## INSTRUCTIONS

Before you begin:

Fill the mountain ice mold with water and pour that water onto a plate from home. Something that is safe to be frozen like a tinfoil tray. You want the water to freeze in a thin plate. Then fill the mountain ice mold with the same amount of water. Place both in the freezer.

1. Take the molds out of the freezer and take them outside.
2. Find a place where they will not be disturbed that gets a fair amount of sunlight every day.
3. Pop the ice out of the molds and place them near each other where they receive the same amount of sunlight.

4. Note when this experiment begins.
5. Check the ice every day and note which of them melts the fastest.
6. Make note of how long it takes for each of the ice molds to melt completely.
